SRS Work Allocation

Mintfy | SE3092 Platform Based Development, Assignment 01 | 19 October 2026

The Software Requirements Specification is split into three equal workloads. Each is grouped by theme so that every member owns a coherent story and can explain it in the live demo. Names follow the order in which they were listed and can be swapped.

At a glance

	Nethma Income and data	**Rivindu** Spending and insights	**Sudheera** Goal and experience
Analysis lenses (Section 2)	Lens 1: income structure	Lens 4: expense entry Lens 5: self-awareness views	Lens 2: why four tools failed Lens 3: making the goal real
Evidence rows (Section 3)	E-01 to E-05 salary, freelance, AdSense, crypto, income estimate	E-06 to E-08 scattered spending, rent and coffee, no categories	E-09 to E-13 the goal and the four failed tools
Functional areas (Section 4)	A: Authentication B: Income sources and receipts	C: Expense capture D: Categories, committed vs discretionary F: Dashboard and insights	E: Savings goal G: Offline and sync H: Error and empty states
Non-functional (Section 5)	NFR-04 Security NFR-05 Data integrity and currency NFR-06 Compatibility	NFR-02 Performance NFR-07 Maintainability	NFR-01 Usability and friction NFR-03 Offline NFR-08 Error handling
Use cases (Section 8)	Areas A and B	Areas C, D and F plus the use-case diagram	Areas E, G and H
Extra duty	1.1 Purpose, 1.2 Scope Final proofread of the merged SRS	1.4 Definitions	Section 9 traceability matrix Appendix A self-check

Workload balance

	Nethma	**Rivindu**	**Sudheera**
Analysis lenses	1	2	2
Evidence rows	5	3	5
Functional areas	2	3	3
Non-functional requirements	3	2	3
Extra duty	Introduction, proofread	Definitions, use-case diagram	Traceability, self-check

Rivindu has the fewest evidence rows but the most functional areas, plus the use-case diagram. Nethma and Sudheera carry more evidence rows to analyse. Overall effort is intended to be about equal.

Individual responsibilities

Nethma | Income and data

OWNS	• Lens 1: income structure • Evidence rows E-01 to E-05, with problem and requirement columns • Functional areas A (authentication) and B (income sources and receipts) • NFR-04 security, NFR-05 data integrity and currency, NFR-06 compatibility • Use cases for areas A and B • Introduction sections 1.1 and 1.2; final proofread of the merged SRS
BE READY TO EXPLAIN	• How four income sources in different currencies become one monthly figure. • What a receipt must store, and why original currency and LKR value are both kept.

Rivindu | Spending and insights

OWNS	• Lens 4: expense entry without bank import • Lens 5: self-awareness views • Evidence rows E-06 to E-08, with problem and requirement columns • Functional areas C (expense capture), D (categories, committed vs discretionary) and F (dashboard and insights) • NFR-02 performance, NFR-07 maintainability • Use cases for areas C, D and F; draws the use-case diagram • Definitions, section 1.4
BE READY TO EXPLAIN	• How a new user sees the committed vs discretionary split within the first week. • What an expense record captures, and how entry stays quick enough to survive past day 13.

Sudheera | Goal and experience

OWNS	• Lens 2: why four tools failed • Lens 3: making the goal real • Evidence rows E-09 to E-13, with problem and requirement columns • Functional areas E (savings goal), G (offline and sync) and H (error and empty states) • NFR-01 usability and friction, NFR-03 offline, NFR-08 error handling • Use cases for areas E, G and H • Traceability matrix (section 9); Appendix A self-check
BE READY TO EXPLAIN	• What the four tools have in common, and which Mintfy decision answers each one. • How the goal screen makes progress toward LKR 490,000 feel real.

Shared rules

- Every requirement needs a priority (Must, Should or Later) and a link to an evidence row in Section 3.
- Requirement IDs already carry the area letter (FR-B1, FR-C2), so IDs will not clash between members.
- When a requirement touches another member's area, add a note such as "see FR-E2" instead of duplicating it.
- Add assumptions and out-of-scope items (Section 7) for your own areas, with a reason.
- Section 6 (Constraints) is already filled in from the brief. Everyone should read it before writing.
- Use Kavindu's real figures where they matter: LKR 490,000, LKR 11,200, four income sources, LKR 24,000 coffee and dining.

Definition of done for a section

- Analysis is written in your own words, not only the evidence list.
- Every requirement is a single, testable statement; every non-functional requirement is measurable.
- No requirement could be pasted into any other finance app unchanged.
- All grey TODO text and yellow example rows in your sections are removed.

Timeline

When	What	Who
Mon 19 Oct	Agree this split; create docs/srs/drafts/ in the repo	Everyone
Tue 20 Oct, evening	Individual drafts finished	Everyone
Wed 21 Oct	Merge session: remove duplicates, agree priorities, check every requirement traces to evidence	Everyone
Wed 21 Oct, later	Use-case diagram, traceability matrix, final proofread	Rivindu, Sudheera, Nethma
Thu 22 Oct	Merged SRS committed to docs/srs/; Firestore schema work begins	Everyone

Avoiding Word merge conflicts in git

Git cannot merge Word files, so two people editing the same .docx will overwrite each other. Each member drafts in a personal copy and one person combines the sections at the merge session.

- Draft files: docs/srs/drafts/SRS-Nethma.docx, SRS-Rivindu.docx, SRS-Sudheera.docx
- Master file: docs/srs/Mintfy-SRS.docx, edited only at the merge session, by Nethma
- Commit small and often with clear messages, for example: "SRS: add income analysis"
- Run git pull before you start and git push when you finish
